as misting and drip irrigation systems which are specifically designed to allow the volume of water delivered to be limited to a level consistent with the water requirement of the plant being irrigated and to allow that water to be placed with a high degree of efficiency in the root zone of the plant, thereby conserving water.

- (3) The low-volume hand watering methods referenced in Rule 40E-24.201(5)(f) shall be fitted with an automatic shut-off device. The use of hand held watering devices are exempt from this Ordinance providing that self shutting nozzles are used. At no time will an open hose be allowed to flow freely unattended, wasting water.
