Walmart and Sam's Club Pharmacies Administer COVID-19 Vaccines in Florida

Walmart and Sam's Club pharmacies will [begin administering COVID-19 vaccines](#) through the U.S. Federal Retail Pharmacy Program on Feb. 12, 2021. More than 1,000 Walmart and Sam's Club pharmacies in 22 states, including Florida, are receiving federal vaccine allocations this week, with an emphasis on locations that reach customers in underserved communities with limited access to health care. (See Attached Florida Locations and Links below for additional information.)

"Florida is proud to partner with Walmart to expand access to the COVID-19 vaccine. We look forward to reaching more Floridians and ensuring that all eligible residents who want a vaccine are able to receive one. We will continue to utilize strategic partnerships and identify innovative ways to get more shots in arms and put Florida's Seniors First," said Governor Ron DeSantis.

With 150 million customers and members passing through our doors each week, Walmart and Sam's Club pharmacists can safely and easily reach customers where they're already shopping for household and health care essentials. We worked with the Centers for Disease Control and Prevention (CDC) and states taking into account the population density, customer demographics, infection rates and availability of local health care resources among other factors to identify many of the participating locations. Visit our [Administering COVID-19 Vaccines page](#).

Vaccine supply and eligibility will vary based on allocation as well as state and local guidelines. The number of vaccinations will be limited and is planned to continue to increase each week. Eligible customers can schedule a vaccine appointment directly via the Walmart and Sam's Club (membership not required) websites once appointments are available today, making it convenient to get vaccinated while allocation lasts.

Walmart and Sam's Club pharmacies will continue to support states and the federal government to help increase the accessibility and availability of COVID-19 vaccines.
